Approach to Greenland  
harbors and shores

Daily Ice-metocean outlook  
focused your requirements

**2017 services**

Sea ice, icebergs, visibility, winds, waves near the Greenland shores often cause challenges or obstacles related to safe vessel approach or departure.

The Danish Meteorological Institute has access to advanced metocean output, observing systems and several cloud independent satellite systems. This setup combined with our operators' many years of experience can provide any captain with crucial near real time information for on-board decision making.

The outlook is delivered as a one-page summary in pdf format and contains:

- Current situation for selected harbor or landing site
- Recent changes
- Met report from nearest weather station
- 24 hours meteorological forecast
- Outlook for waves and tides
- Outlook for the coming week

The typical coverage is app. 50 nm x 50 nm.

Additional information can be added on request.
